Worming and Flea treatment options For Cats

There are many flea and worming treatments available on the market which can make choosing the best combination for your pet VERY confusing! Many products change in their availability and with regards to the recommendations on the data sheet. Your pet's needs may also vary due to their particular lifestyle such as foreign travel, exposure to the countryside, diet and exposure to children to name a few.

Sadly, **NOT one single product treats everything** as yet, but hopefully this guide will provide some information on what combinations you can use....

Stonghold

What form is it in? Spot on applied monthly

Active ingredient: selamectin

Treats: roundworms, biting lice, fleas, ear mites, heartworm

Use from: 7 weeks of age

Use with: milbemax

Ideal for: outdoor cats, does NOT give fully cover against zoonotic disease with children.

ProFender

What form is it in? Spot on given every 3 months

Active ingredient: Emodepside, praziquantel

Treats: roundworms, tapeworms

Use from: 8 weeks of age

Use with: frontline

Ideal for: outdoor cat, family with children
