## Worming and Flea treatment options

### For Dogs

There are many flea and worming treatments available on the market which can make choosing the best combination for your pet VERY confusing. Many products change in their availability and with regards to the recommendations on the data sheet. Your pet's needs may also vary due to their lifestyle such as foreign travel, exposure to the countryside, diet and exposure to children to name a few!

**No one product does everything** but hopefully this guide will provide some information on what you can use.

### Veloxa

**What form is it in?** Chewable tablet given every 3 months

**Active ingredient:** fenantel, pyrantel, praziquantel

**Treats:** roundworms and tapeworms

**Use from:** >2.5Kg NOT pregnant dogs but can be used in lactating dogs

**Use with:** Advocate

**Ideal for:** city dogs do not have a high exposure to the countryside

### Milbepworm

**What form is it in?** Tablet (also chewable) given monthly

**Active ingredient:** milbemycin, praziquantel

**Treats:** roundworms, tapeworms, lungworm, heartworm

**Use from:** >2 weeks of age, >0.5KG. NOT in collies

**Use with:** Nexguard, Bravecto

**Ideal for:** dogs that regularly swim, have contact with foxes, travel abroad.
